Yassine Bouali

Backend Software Engineer Python

Morocco • Open to remote and relocation • yassine.bouali.bo@gmail.com • linkedin.com/in/ybouali • github.com/Ybouali • www.ybouali.dev

SUMMARY

Backend software engineer with practical experience building services and web applications in Python and Django, and a strong interest in software architecture, database design, and API development. Comfortable across the stack but focused on backend systems: relational data modelling with PostgreSQL, REST API design, containerised deployment with Docker, and multi-tenant application structure. Currently developing a backend-focused SaaS project (FastAPI, async SQLAlchemy, PostgreSQL) while contributing to open-source Python tooling.

EXPERIENCE

Full Stack Engineer Intern **2025 – 2026**

Koolskools

- Developed a cross-platform mobile application in React Native, followed by a companion web application in React.
- Built backend services and REST APIs using Django and Python, with PostgreSQL for relational data modelling and application workflows.
- Implemented real-time team chat and notifications using Socket.IO, and integrated the Google Gemini API into a user feedback platform.
- Containerised development and application services with Docker and Docker Compose; used AWS S3 for file storage and AWS EC2 for service hosting.
- Contributed to a team and task management platform across frontend and backend layers.

Full Stack Developer Intern **Jan 2025 – May 2025**

ORMVA/TF

- Developed internal web application features for business workflows using React on the frontend and Django/Python on the backend.
- Designed and integrated PostgreSQL data models; connected frontend components to backend REST APIs and database operations.

PROJECTS

GMAO SaaS *private repository*

Backend-focused SaaS application for maintenance management (active development). Multi-tenant architecture with tenant isolation, authentication, permission-based access control, membership invitations, and Docker-based development infrastructure. Implemented with FastAPI, asynchronous SQLAlchemy, PostgreSQL, and Alembic migrations. Planned and in progress: asynchronous background processing and expanded reporting.

yb-observability *PyPI: yb-observability*

Open-source Python library for reusable configuration and logging infrastructure. Configuration loader supports YAML files with environment-variable substitution and safe handling of values that would otherwise break YAML structure; logging layer built on Loguru with per-service directories and rotation. Published on PyPI with a tested public API.

EDUCATION

Software Engineering Program **2021 – 2026**

1337 (peer-to-peer engineering school)

- Project-based curriculum covering algorithms, C/C++, systems programming, Unix, networking, and web development.

Multimedia Development **2019 – 2021**

Institut Multihexa

- UI/UX, JavaScript, and front-end development foundations.

Mathematics & Computer Science **2018 – 2019**

Faculty of Sciences, Moulay Ismail University

Scientific Baccalaureate **2016 – 2017**

Ibn Tahir High School

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C/C++
Backend: FastAPI, Django, REST APIs, SQLAlchemy, Socket.IO
Databases: PostgreSQL, Alembic migrations
Infrastructure: Docker, Docker Compose, AWS (S3, EC2), Git
Frontend: React, React Native, Tailwind CSS
AI integration: Google Gemini API, LangChain, RAG pipelines (integration, not model development)

LANGUAGES

Arabic (native) • French (fluent) • English (professional working proficiency)
