SUMMARY

Backend engineer building Python and Django services, REST APIs, and PostgreSQL data models, focused on software architecture and containerised deployment. Currently developing a multi-tenant SaaS (FastAPI, async SQLAlchemy) and maintaining an open-source Python library on PyPI.

EXPERIENCE

Full Stack Engineer Intern **2025 – 2026**
Koolskools

- Built Django backend services and REST APIs with PostgreSQL; containerised with Docker and Docker Compose; used AWS S3 and AWS EC2.
- Implemented real-time chat and notifications with Socket.IO; integrated the Google Gemini API into a feedback platform; built a React Native app and companion React web app.

Full Stack Developer Intern **Jan 2025 – May 2025**
ORMVA/TF

- Built internal web application features with React and Django, including PostgreSQL models and REST API endpoints for business workflows.

SELECTED PROJECTS

GMAO SaaS *In development*
Backend-first multi-tenant SaaS for industrial maintenance management. Tenant isolation is a first-class requirement: each organisation has its own users, permissions, and domain data, with membership through an invitation flow. Authorisation is permission-based and resolves through the membership chain rather than flat roles. Built with FastAPI, async SQLAlchemy, PostgreSQL, and Alembic; containerised with Docker Compose. Background processing is planned.

yb-observability *PyPI: yb-observability*
Open-source Python library for reusable configuration and logging infrastructure. The configuration loader substitutes environment variables after YAML parsing, so values containing colons or hashes cannot corrupt the document structure. Logging built on Loguru with per-service rotation. Published on PyPI with a tested public API.

NoybStruct *Live: struct.noybcore.com*
Live software design-patterns learning platform with structured explanations and code examples. Content modelled in PostgreSQL via Prisma; sessions handled by Auth.js.

EDUCATION

Software Engineering Program **2021 – 2026**
1337 (peer-to-peer engineering school)

- Project-based curriculum: algorithms, C/C++, systems programming, Unix, networking, web development.

CERTIFICATIONS

Cloud Native, Microservices, Containers, DevOps and Agile — IBM/Coursera (2025)
IBM Java Developer Professional Certificate — Coursera (2025)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C/C++
Backend: FastAPI, Django, SQLAlchemy, REST APIs, Socket.IO, multi-tenancy, authentication, authorisation
Databases: PostgreSQL, SQL
Infrastructure: Docker, Docker Compose, AWS (S3, EC2), Git, Linux
Frontend: React, React Native, Next.js, Tailwind CSS
AI integration: Google Gemini API, RAG system design

LANGUAGES

Arabic (native) • French (conversational) • English (professional working proficiency)
