Yassine Bouali

Backend Software Engineer — Python

Morocco • Open to remote and relocation • yassine.bouali.bo@gmail.com • linkedin.com/in/ybouali • github.com/Ybouali • www.ybouali.dev

SUMMARY

Backend engineer with practical experience building Python and Django services, REST APIs, and PostgreSQL data models. Focused on software architecture, database design, and containerised deployment. Currently developing a multi-tenant SaaS (FastAPI, async SQLAlchemy) and maintaining an open-source Python library on PyPI.

EXPERIENCE

Full Stack Engineer Intern **2025 – 2026**

Koolskools

- Built Django and Python backend services and REST APIs, with PostgreSQL for relational data modelling and application workflows.
- Implemented real-time team chat and notifications using Socket.IO; integrated the Google Gemini API into a user feedback platform.
- Containerised development and application services with Docker and Docker Compose; used AWS S3 for storage and AWS EC2 for hosting.
- Developed a cross-platform mobile application in React Native and a companion web application in React.

Full Stack Developer Intern **Jan 2025 – May 2025**

ORMVA/TF

- Built internal web application features for business workflows with React on the frontend and Django/Python on the backend.
- Designed and integrated PostgreSQL data models; connected frontend components to backend REST APIs.

PROJECTS

GMAO SaaS *private*

Backend-first multi-tenant SaaS for industrial maintenance management, under active development. Tenant isolation is a first-class requirement: each organisation has its own users, permissions, and domain data, with membership through an invitation flow. Authentication is session-based; authorisation is permission-based rather than flat roles, and resolves through the membership chain. Implemented with FastAPI, asynchronous SQLAlchemy, PostgreSQL, and Alembic migrations; containerised with Docker Compose. Planned and in progress: asynchronous background processing, maintenance reporting.

yb-observability *PyPI: yb-observability*

Open-source Python library for reusable configuration and logging infrastructure. The configuration loader performs environment-variable substitution after YAML parsing, so values containing colons, hashes, or newlines cannot corrupt the document structure. Logging built on Loguru with per-service directories and daily rotation. Published on PyPI with a tested public API and CI (Ruff, Pyright, Pytest).

NoybStruct *Live: struct.noybcore.com*

Live software design-patterns learning platform. Structured pattern explanations and code examples, with content modelled in PostgreSQL via Prisma and sessions handled by Auth.js. The engineering focus is the data model: keeping pattern definitions, code samples, and per-user state queryable as the pattern set grows.

EDUCATION

Software Engineering Program **2021 – 2026**

1337 (peer-to-peer engineering school)

- Project-based curriculum covering algorithms, C/C++, systems programming, Unix, networking, and web development.

Multimedia Development **2019 – 2021**

Institut Multihexa

CERTIFICATIONS

Cloud Native, Microservices, Containers, DevOps and Agile — IBM/Coursera (2025)
IBM Java Developer Professional Certificate — Coursera (2025)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C/C++
Backend: FastAPI, Django, SQLAlchemy, REST APIs, Socket.IO
Databases: PostgreSQL, SQL
Infrastructure: Docker, Docker Compose, AWS (S3, EC2), Git, Linux
Frontend: React, React Native, Next.js, Tailwind CSS
Architecture: Multi-tenancy, authentication, authorisation, permission models, software design patterns
AI integration: Google Gemini API, RAG system design

LANGUAGES

Arabic (native) • French (conversational) • English (professional working proficiency)
